

a Distribution of complete proving times

All 240 measured proofs: 80 per anchor. Each curve includes every run.

b Additional proving time from block anchoring

Points: paired time change. Bars: nominal 95% t intervals (80 pairs).

Early drift affects paired ratios; intervals assume independent rounds.
Apple M5 Max · 11 workers · AC power. One mainnet fixture with a fixed proof shape.
*Hypothetical SSZ summary; both state tries remain Keccak.
